Distribution of EXIM containers for the month of August 2024 across all ports:

**Import Containers Distribution (52.2%)**  
(Container count in % for Aug'24)

**Export Containers Distribution (47.8%)**  
(Container count in % for Aug'24)

In the previous month, container distribution in Import and Export cycle was 51.5% and 48.5% respectively.

Others include Kandla, Haldia, Paradip and New Mangalore

# Key Observations

In comparison with July 2024:

## Pan India

- Container count (no. of boxes) has **increased by 10%** in import cycle primarily due to western region, where the volume handled has increased by 15%
- Top performing terminal for this month is Bharat Mumbai Container Terminals (PSA)

## Western Region

- JNPA port dwell time **performance has reduced by 25%** in import cycle as the import container volume has increased by 21% due to higher vessel calling coupled with heavy rainfall leading to increase in container handling time.
- Kandla port dwell time **performance has reduced by 319%** in import cycle due to unfavourable weather and heavy rain, the containers were stored at the port for a longer time.
- Hazira port dwell time **performance has reduced by 32%** in import cycle as the import container volume has increased by 29%.

## Southern Region

- Southern region dwell time **performance has improved by 13%** in export cycle. This can be attributed to the improvement observed in the three primary ports of the area, namely Chennai, Kattupalli, and Ennore.
- Chennai, Kattupalli and Ennore port dwell time **performance has improved by 14%, 12% and 10% respectively** in export cycle as vessel bunching led to faster loading of export bound containers.
- Chennai, Kochi and Kattupalli port dwell time **performance has reduced by 30%, 36% and 29% respectively** in import cycle due to increased vessel bunching at the port owing to Red Sea crisis. This led to space shortage at yards causing high congestion and operational slowdown, leading to high dwell time.

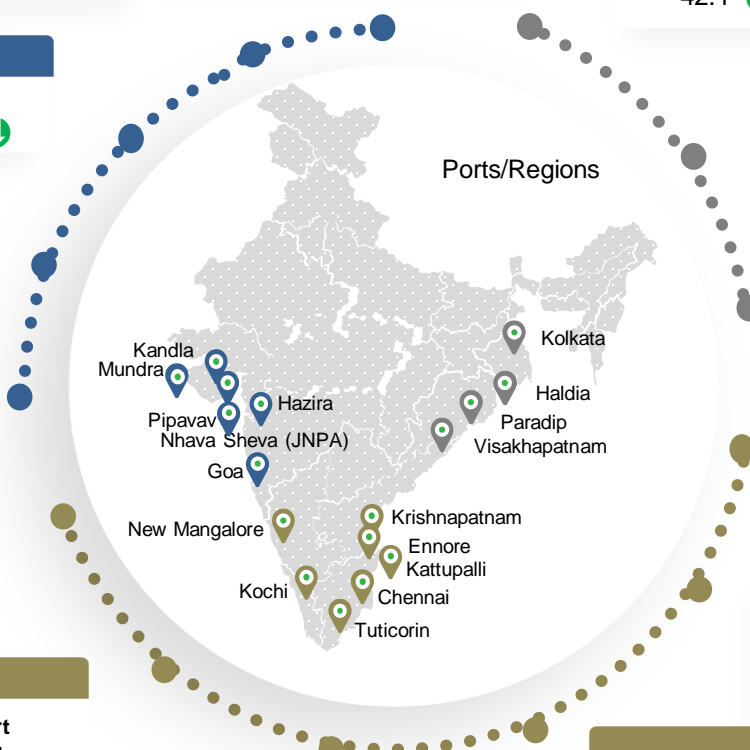

## Eastern Region

- Haldia port dwell time **performance has improved by 23%** in import cycle as the import container volume has decreased by 42%.
- Visakhapatnam region CFS dwell time **performance has improved by 21%** in export cycle as export volume of certain commodities carried out from CFS has reduced.

# CONGESTION & TRANSIT ANALYSIS

The analysis aims to understand the level of traffic around ports and CFS region to measure the congestion level on the route:

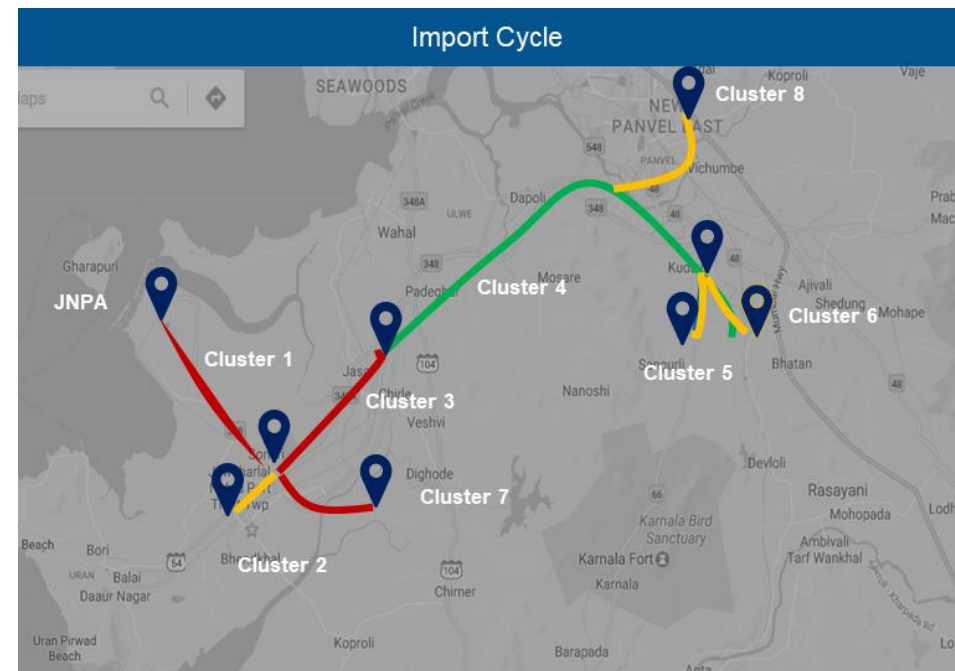

## Methodology

**Step 1** CFSs are divided into clusters based on their vicinity

**Step 2** Cluster based transit time is calculated. The transit time is the travel time between CFS clusters and port or vice versa.

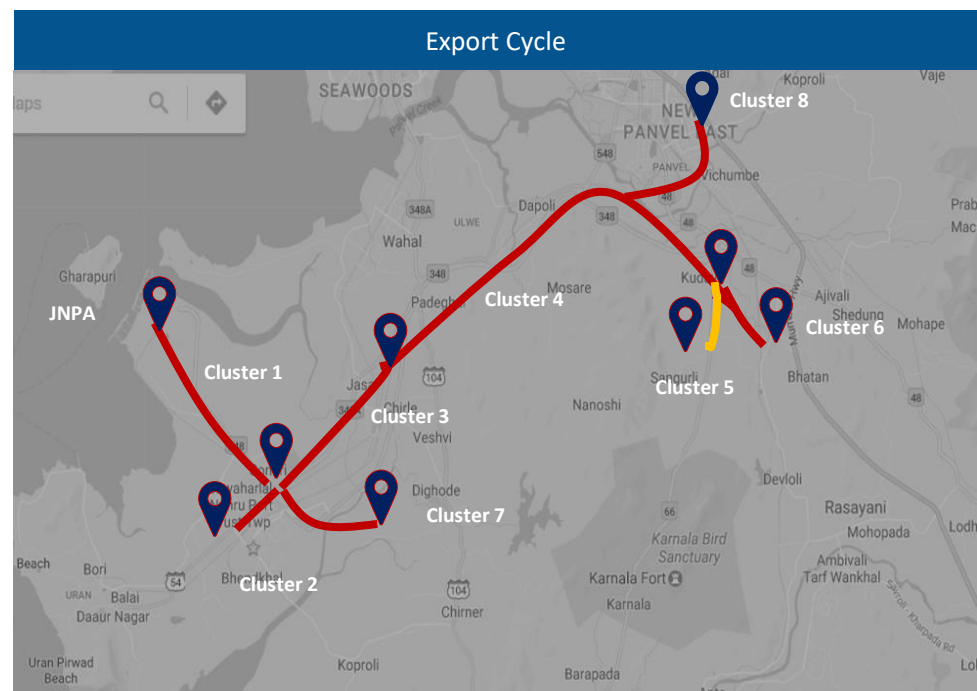

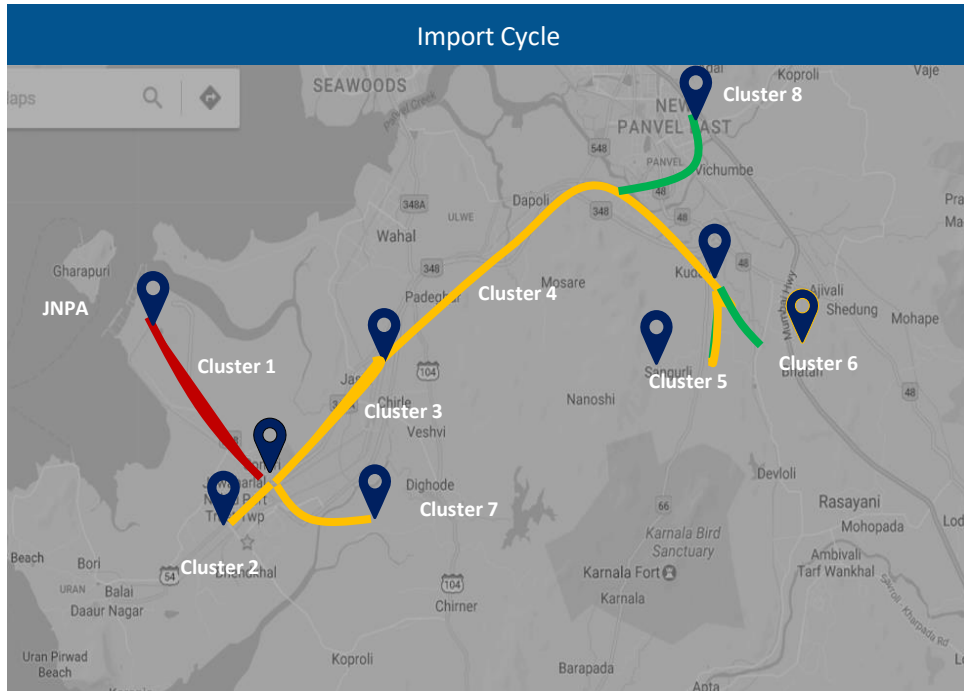

**Step 3** Cluster based congestion level is calculated as per below steps:

1. Cluster based transit time is compared with threshold
2. Threshold is 3X of time showcased on Google Maps between the Origin-Destination (OD) pair
3. Intensity of congestion is classified as below:
  - High congestion:  $>2$  times the threshold
  - Medium congestion:  $>1.5$  to  $\leq 2$  times the threshold
  - Low congestion:  $>1$  to  $\leq 1.5$  times the threshold

Congestion Level    ■ High    ■ Medium    ■ Low
