PAN India Distribution

Distribution of EXIM containers for the month of September 2024 across all ports:

Import Containers Distribution (51.7%) (Container count in % for Sep'24)

Export Containers Distribution (48.3%) (Container count in % for Sep'24)

In the previous month, container distribution in Import and Export cycle was 52.2% and 47.8% respectively.

Others include Kandla, Haldia, Paradip and New Mangalore

Key Observations

In comparison with August 2024:

Pan India

- Container count (no. of boxes) has **increased by 1.3% & 3.1%** in both import and export cycle primarily due to southern region, where the volume handled has increased by 19% in import & 26% in export cycle
- Top performing terminal for this month is Bharat Mumbai Container Terminals (PSA)

Western Region

- Western region dwell time **performance has reduced by 32%** in import cycle which is majorly due to the Mundra port where the dwell time **performance has reduced by 69%** in import cycle.
- Kandla port dwell time **performance has improved by 33%** in import cycle as the ongoing civil work outside port is completed.
- Pipavav port dwell time **performance has reduced by 37%** in import cycle as the port allows an additional free time to the customers thus the containers stay at the port for a long time.
- JNPA CFS transit time **performance has improved by 24%** in export cycle due to significant reduction in congestion as compared to previous month.

Southern Region

- Southern region dwell time **performance of empty containers has improved by 14%** in export cycle as increased vessel call volume led to faster clearance of containers in the region.
- Kattupalli port dwell time **performance has reduced by 33%** in import cycle due to ongoing red sea crisis, vessel bunching, and a shortage of space at the yards that causes congestion and longer dwell times.

Eastern Region

- Visakhapatnam port dwell time **performance has reduced by 26%** in import cycle due to longer period of stay at the yard for certain containers, leading to decrease in dwell time performance.
- Haldia port dwell time **performance has improved by 29%** in export cycle as the export containers were handled on priority due to festival season.
- Haldia port dwell time **performance has reduced by 30%** in import cycle as import container volume has increased by 54% leading to increase in container clearance time.

CONGESTION & TRANSIT ANALYSIS

The analysis aims to understand the level of traffic around ports and CFS region to measure the congestion level on the route:

Methodology

Step 1 CFSs are divided into clusters based on their vicinity

Step 2 Cluster based transit time is calculated. The transit time is the travel time between CFS clusters and port or vice versa.

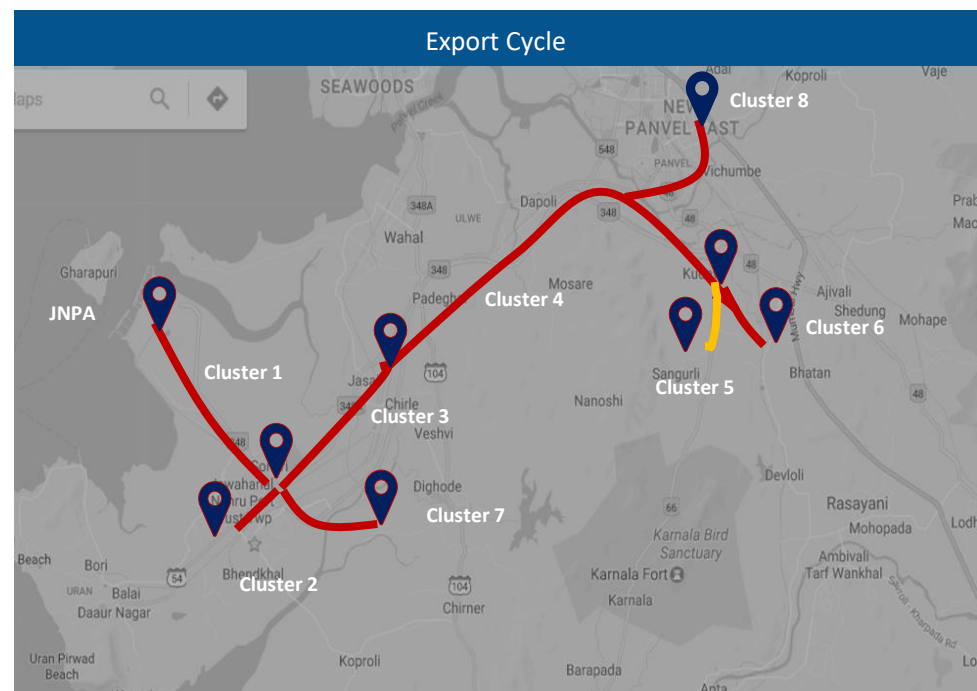

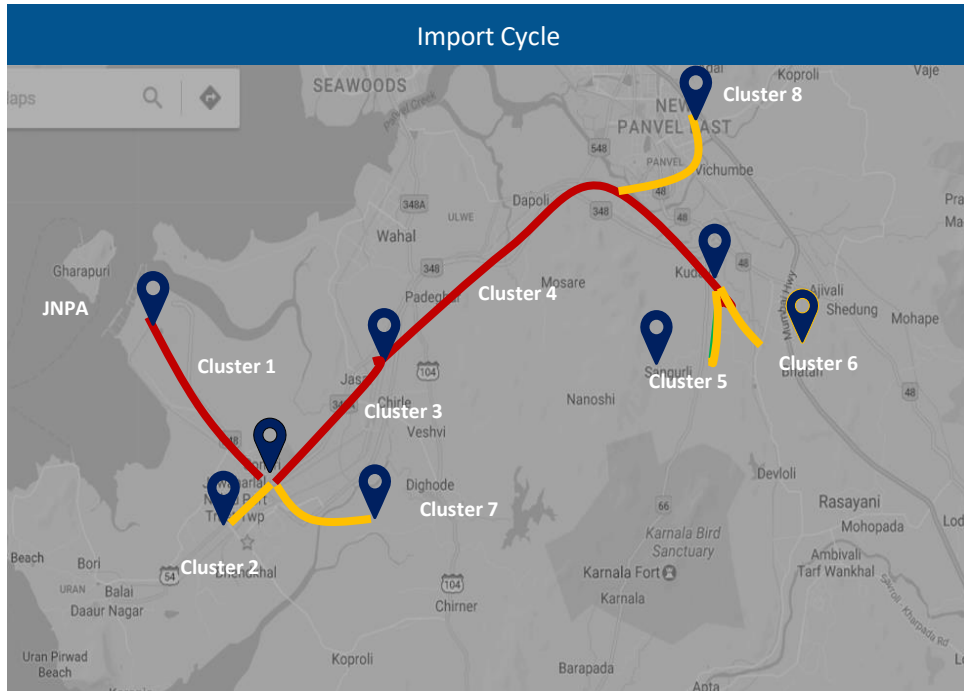

Step 3 Cluster based congestion level is calculated as per below steps:

1. Cluster based transit time is compared with threshold
2. Threshold is 3X of time showcased on Google Maps between the Origin-Destination (OD) pair
3. Intensity of congestion is classified as below:
 - High congestion: >2 times the threshold
 - Medium congestion: >1.5 to ≤ 2 times the threshold
 - Low congestion: >1 to ≤ 1.5 times the threshold

Congestion Level ■ High ■ Medium ■ Low
