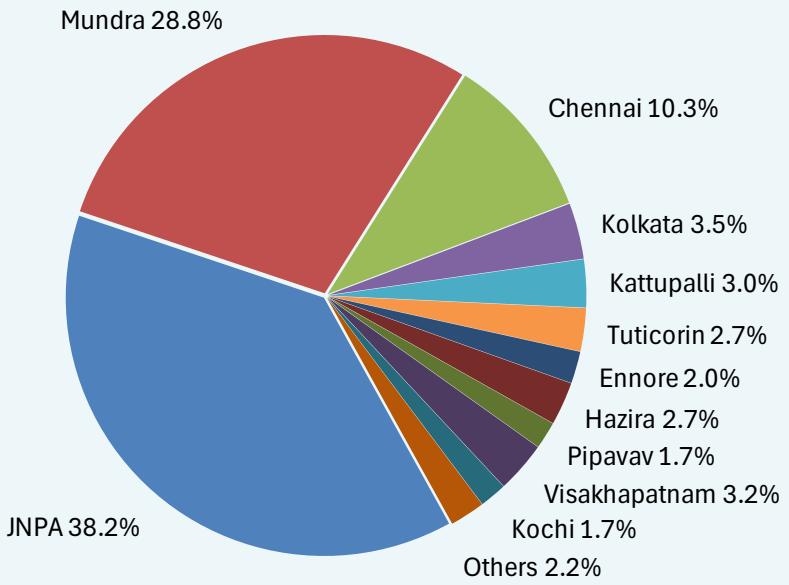
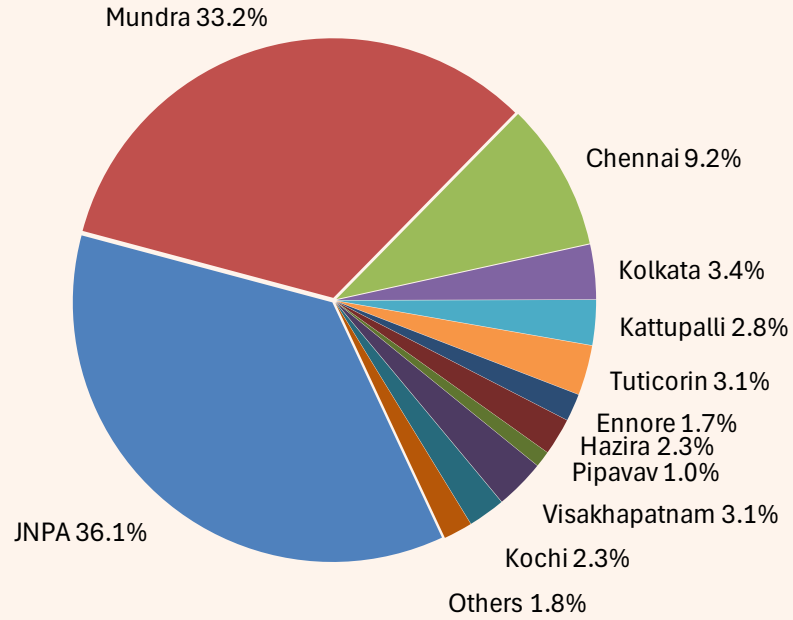
PAN India Distribution

Distribution of EXIM containers for the month of October 2024 across all ports:

Import Containers Distribution (49.8%) (Container count in % for Oct'24)



Export Containers Distribution (50.2%) (Container count in % for Oct'24)



In the previous month, container distribution in Import and Export cycle was 51.7% and 48.3% respectively.

Others include Kandla, Haldia, Paradip and New Mangalore

Key Observations

In comparison with September 2024:

Pan India	• Container count (no. of boxes) has **reduced by 5.0%** in import cycle primarily due to southern and eastern region, where the volume handled has **reduced by 15% and 15%,** respectively. • Container count (no. of boxes) has **increased by 2.7%** in export cycle primarily due to western region, where the volume handled has **increased by 8%** in export cycle. • Top performing terminal for this month is Bharat Mumbai Container Terminals (PSA).
Western Region`	• Western region dwell time **performance has improved by 44%** in import cycle which is majorly due to JNPA and Mundra port where the dwell time **performance has improved by 47% and 43%** respectively in import cycle. • JNPA port import cycle dwell time **performance has improved by 47%** from the previous month (Oct'24 import cycle dwell time: 20.3 hrs).The notable improvement can be attributed to the removal of traffic restrictions that were imposed in September month due to the Ganpati festival. These restrictions had resulted in increased congestion the port in September month. Improvement in October thus is mainly due to the resolution of September month's congestion. • Mundra port import cycle dwell time **performance has improved by 43%** from the previous month (Oct'24 import cycle dwell time: 25.7hrs).This significant improvement can be attributed to the completion of ongoing construction work which impacted the dwell time during previous month. The development of five additional electric rail lines has reduced container handling time and congestion, leading to improved performance.
Southern Region	• Southern region dwell time **performance has improved by 24%** in import cycle as reduced vessel calls led to faster clearance of containers in the region. • Kattupalli port dwell time **performance has improved by 30%** in import cycle due to low vessel calling and faster container clearance at the yard. • Tuticorin CFS transit time **performance has reduced by 19%** in export cycle due to ongoing road widening work.
Eastern Region	• Haldia port dwell time **performance has improved by 24%** in import cycle as there was low vessel calling due to festive month, leading to faster container clearance at the port. • Kolkata port dwell time **performance has reduced by 26%** in import cycle due to high congestion and entry restrictions for trucks because of festive season. • Kolkata CFS transit time **performance has reduced by 25%** in import cycle. This is also a result of heavy congestion and truck entry restrictions due to the festive season. • Haldia CFS dwell time **performance has reduced by 20%** in import cycle due to high congestion because of festive season.

CONGESTION & TRANSIT ANALYSIS

Congestion Analysis & Methodology

The analysis aims to understand the level of traffic around ports and CFS region to measure the congestion level on the route :

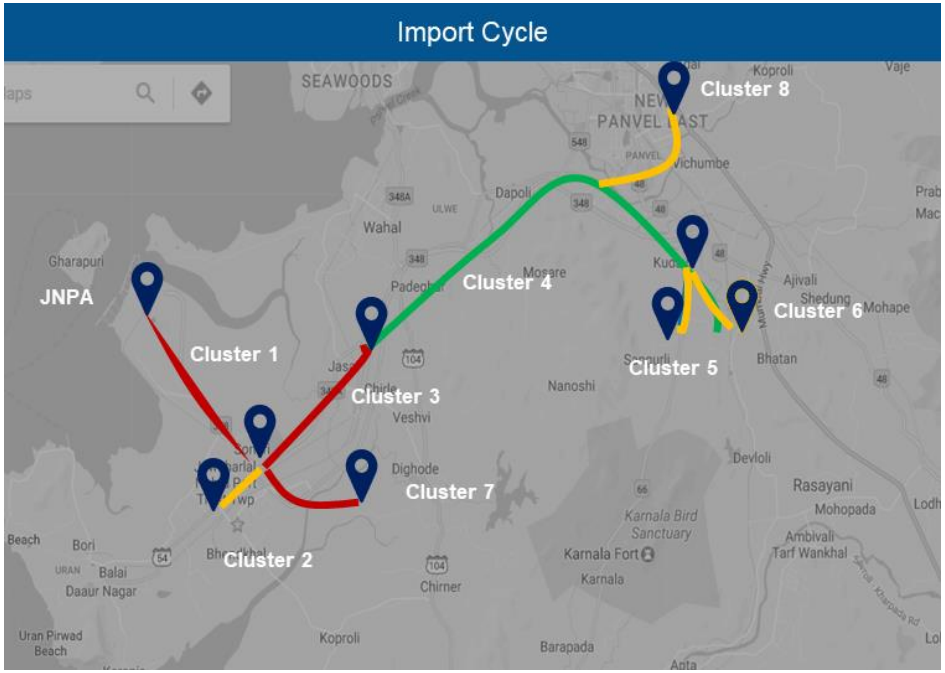
Methodology

Step 1 CFSs are divided into clusters based on their vicinity

Step 2 Cluster based transit time is calculated. The transit time is the travel time between CFS clusters and port or vice versa.

Step 3 Cluster based congestion level is calculated as per below steps:

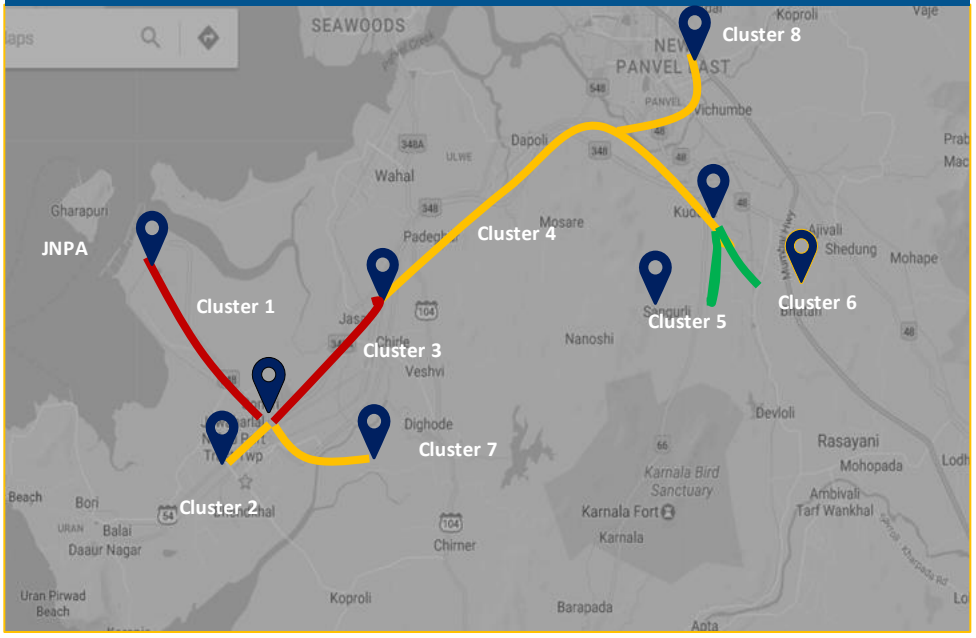
1. Cluster based transit time is compared with threshold
2. Threshold is 3X of time showcased on Google Maps between the Origin-Destination (OD) pair
3. Intensity of congestion is classified as below:
   - High congestion: >2 times the threshold
   - Medium congestion: >1.5 to <=2 times the threshold
   - Low congestion: >1 to <=1.5 times the threshold



Congestion Level — High — Medium — Low

Congestion Analysis: JNPA Region

Import Cycle



Cluster	Cluster Name	No. of CFS	% of Total Containers	Congestion
Cluster 1	JNPA Area	1	11.45%	High
