Distribution of EXIM containers for the quarter of OND 2025 across all ports:

Import Containers Distribution (50.7%)
(Container count in % for OND'25)

Export Containers Distribution (49.3%)
(Container count in % for OND'25)

In the previous quarter, container distribution in Import and Export cycle was 51.2% and 48.8% respectively.

Others include Kandla, Haldia, Paradip, New Mangalore and Gangavaram.

In comparison with JAS 2025:

Pan India

- Container count (no. of boxes) has **decreased by 1.3%** in import cycle with **decrease** in southern region by **8.8%**.
- Container count (no. of boxes) has **increase by 0.6 %** in export cycle with **increase** in western and eastern regions by **0.7%** and **3.8%**.
- Top performing terminal for this month is Bharat Mumbai Container Terminal (PSA).

Western Region

- Hazira port dwell time **performance has improved by 28%** in import cycle. This improvement aligns with the seasonal trend observed since 2023, where OND'25 has seen lower dwell time.
- Kandla port dwell time **performance has reduced by 95%** in import cycle. This reduction is due to adverse weather conditions, which restricted movement from the terminal for brief periods in October and November, leading to the prolonged waiting of containers at the terminal.

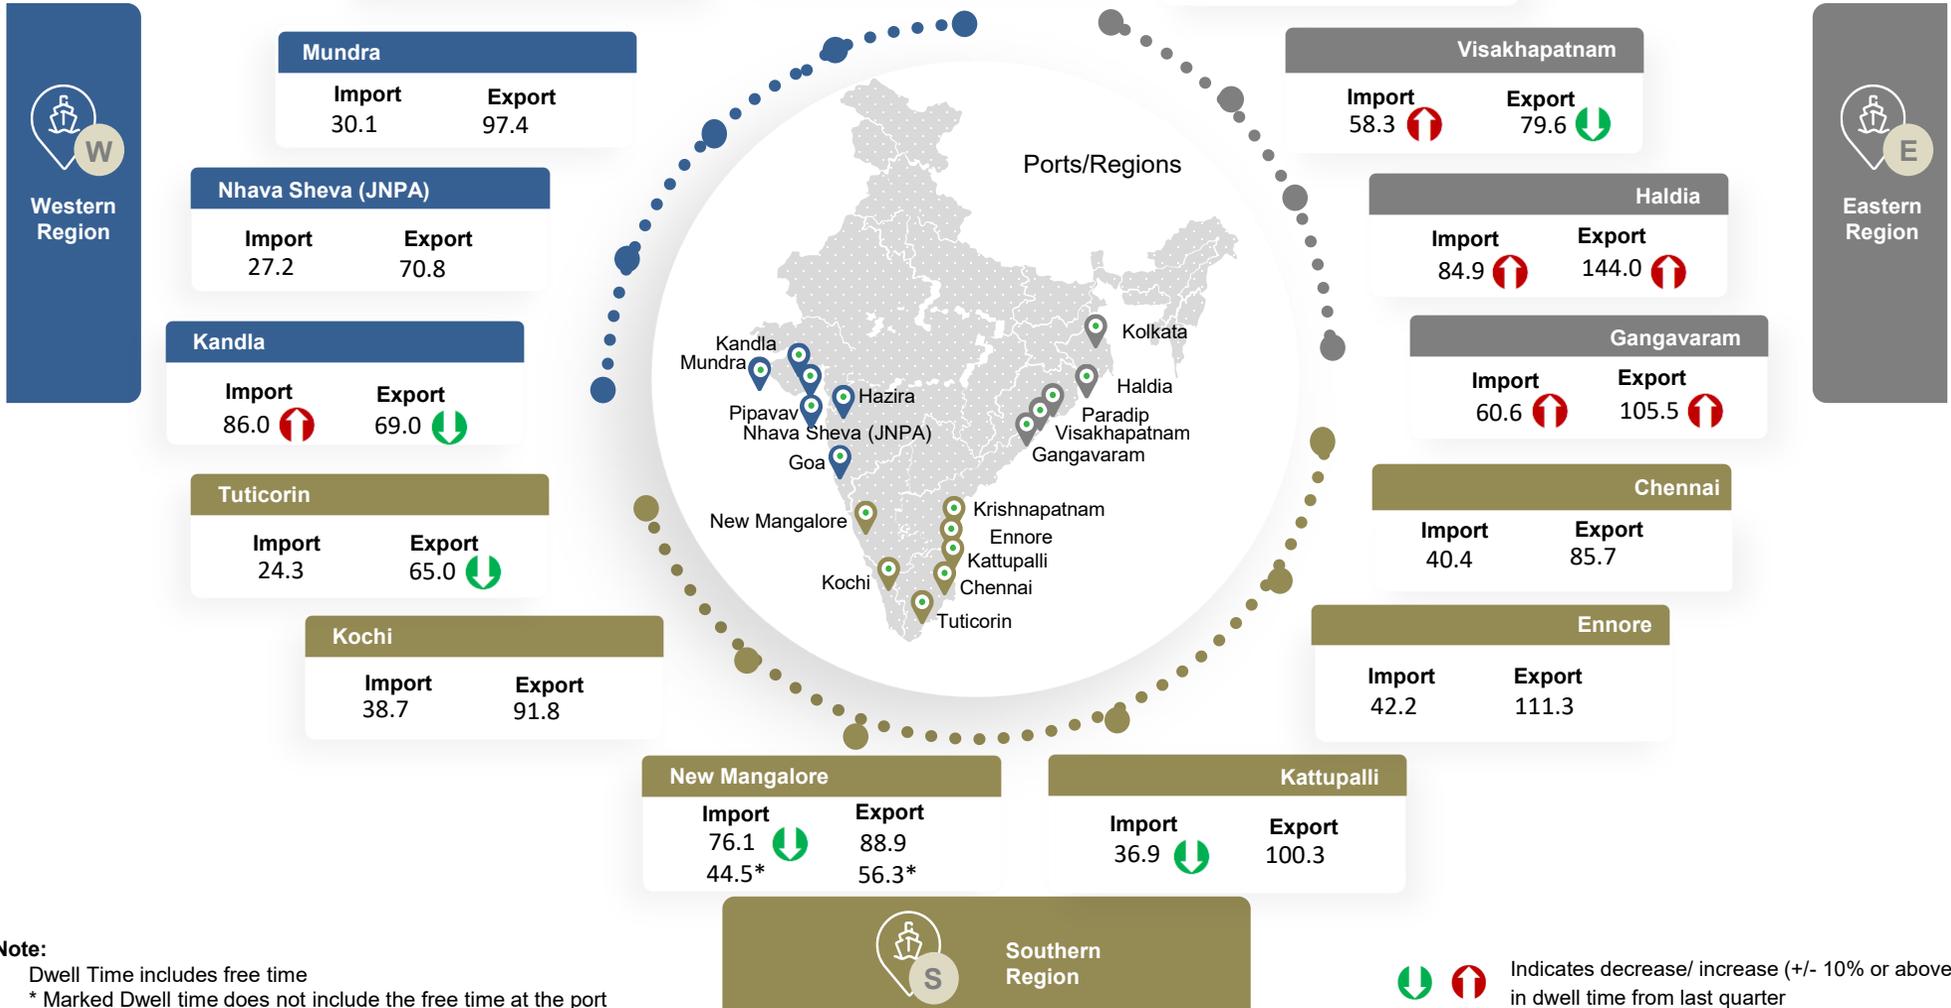

Southern Region

- Chennai Port to CFS and CFS to Port transit time **performance has improved by 14% and 8%**. This improvement is due to a reduction in passenger vehicle movements on the stretch during the festive season in October 2025.

Eastern Region

- Kolkata port dwell time **performance has reduced by 11%** in import cycle. This reduction aligns with the seasonal trend observed since 2023, where the dwell time tends to peak in the OND quarter.
- Visakhapatnam port dwell time **performance has improved by 13%** in export cycle. This improvement is attributed to the increase in vessel handling productivity and the reduced turnaround time of vessels, leading to efficient container clearance.
- Haldia port dwell time **performance has reduced by 24%** in import cycle. This reduction aligns with the seasonal trend observed since 2023, where the dwell time tends to peak in the OND quarter.

CONGESTION & TRANSIT ANALYSIS

The analysis aims to understand the level of traffic around ports and CFS region to measure the congestion level on the route:

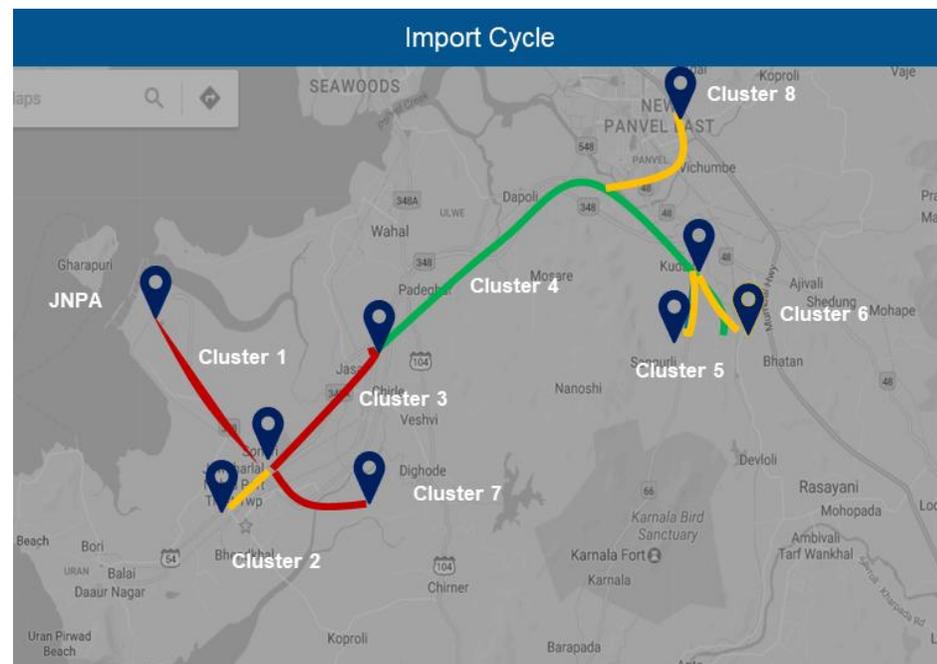

Methodology

Step 1 CFSs are divided into clusters based on their vicinity

Step 2 Cluster based transit time is calculated. The transit time is the travel time between CFS clusters and port or vice versa.

Step 3 Cluster based congestion level is calculated as per below steps:

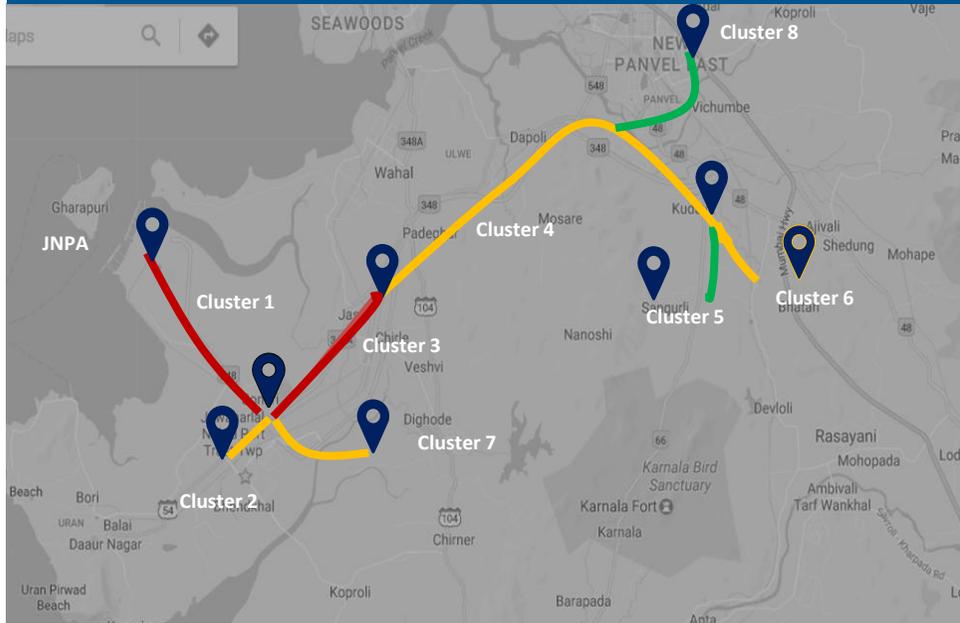

1. Cluster based transit time is compared with threshold
2. Threshold is 3X of time showcased on Google Maps between the Origin-Destination (OD) pair
3. Intensity of congestion is classified as below:
 - High congestion: >2 times the threshold
 - Medium congestion: >1.5 to ≤ 2 times the threshold
 - Low congestion: >1 to ≤ 1.5 times the threshold

Container Turnaround Time (TAT)

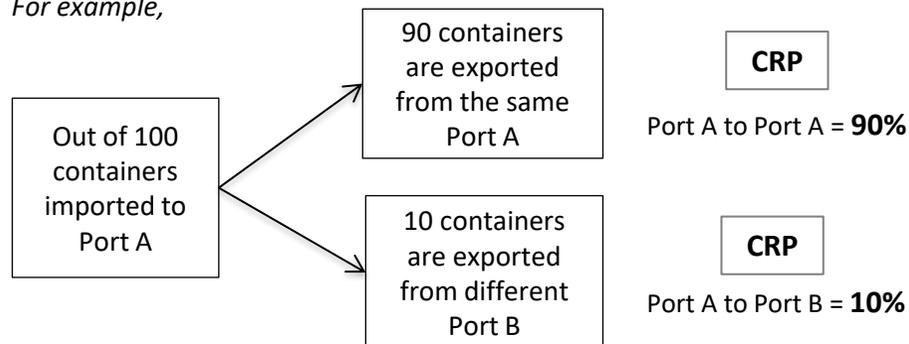

Container Turnaround Time (TAT) refers to the total time a container spends in a country, from its arrival to port in import cycle to its departure from the port in export cycle

Container Retention Percentage (CRP)

Container turnaround analysis also showcases the percentage of container count (no. of boxes) retained by respective ports.

For example,

Overall Average Dwell Time (OADT) / Overall Average Volume (OAV)

Overall Average Dwell Time (OADT) / Overall Average Volume (OAV) refers to the average dwell time/volume of the entity, calculated from the inception of the entity

For example,

If the terminal/port has started its LDB operations from January 2020 then:

OADT/OAV (current month) = Overall average dwell time/volume of the terminal/port from January 2020 till current month

Quarterly Average Dwell Time (QADT) / Quarterly Average Volume (QAV)

Quarterly Average Dwell Time (QADT) / Quarterly Average Volume (QAV) refers to the average dwell time/volume of the entity, calculated for all years of that quarter

For example,

If the terminal/port has started its LDB operations from January 2020 then:

QADT/QAV (JOND'25) = Quarterly average dwell time/volume of the terminal/port combined for OND'20, OND'21, OND'22, OND'23 and OND'24
