Job Title: UI/UX Developer

Experience: 3–8 years
Location: New Delhi – On Site
Department: Technology / Product Development
Reporting To: Product Manager / Tech Lead

About NICDC Logistics Data Services Limited

We are a leading logistics and supply chain data services provider, leveraging technology to streamline and optimize operations across the logistics ecosystem. Our mission is to build scalable, data-driven platforms that enhance visibility, efficiency, and user experience in the logistics domain.

Job Overview

We are looking for a talented and experienced **UI/UX Developer** to join our product team. The ideal candidate will have a strong background in designing and developing intuitive, scalable, and accessible user interfaces for enterprise-level web and mobile applications. You will collaborate closely with product managers, developers, and stakeholders to deliver exceptional user experiences that align with business goals.

Key Responsibilities

- **Design & Prototyping:** Create wireframes, interactive prototypes, and high-fidelity mock-ups for web and mobile platforms using tools like **Figma, Framer, and Adobe Creative Suite**.

- **User Research & Testing:** Conduct user interviews, usability testing, and UX audits to identify pain points and improve product adoption.

- **Design Systems:** Develop and maintain scalable design systems ensuring consistency across platforms.

- **Collaboration:** Work closely with developers to ensure seamless implementation of designs and maintain design integrity throughout the development lifecycle.

- **Data-Driven Design:** Design dashboards and data visualization interfaces for logistics and supply chain management systems.

- **Accessibility & Usability:** Ensure all designs are accessible, user-friendly, and aligned with industry best practices.

- **Iterative Improvement:** Continuously iterate on designs based on user feedback, analytics, and business requirements.

Required Skills & Qualifications

- **Experience:** 3–8 years in **UI/UX design and development**, preferably in **enterprise, SaaS, logistics, or supply chain domains**.

- **Design Tools:** Proficiency in **Figma, Adobe XD, Photoshop, Illustrator, and prototyping tools**.

- **UX Methodologies:** Strong understanding of **user-centred design, information architecture, user flows, wireframing, and usability testing**.

- **Front-End Awareness:** Familiarity with **HTML/CSS, responsive design, and basic front-end development principles** is a plus.

- **Portfolio:** A strong portfolio showcasing **end-to-end design projects, design systems, and data-intensive interfaces**.

- **Soft Skills:** Excellent communication, teamwork, and problem-solving skills. Ability to work in an agile environment.

Preferred Qualifications

- Experience with **AI-driven products, dashboard design, or real-time data visualization**.

- Knowledge of **design thinking frameworks** (e.g., IBM Design Thinking).

- Certifications in **UX/UI design** (e.g., Google UX Design, Adobe UX Foundation).

- Background in **engineering or computer science** is advantageous.
